Summary

Software Engineer with 3+ years of experience building scalable, production-grade web applications across EdTech and FinTech. Strong in frontend and full-stack development with React.js, Vue.js, Nuxt.js, FastAPI, Java, PostgreSQL, and MongoDB, with experience in cloud infrastructure, CI/CD, authentication, and data-driven applications. Leverage AI agents, reusable skills, and automated workflows to reduce repetitive engineering work, accelerate development, and increase engineering throughput.

Education

IIITDM Kancheepuram

Bachelor of Technology in Computer Science and Engineering

Sep 2020 - May 2024

Tamil Nadu

Experience

Software Engineer

Quantium Tech Private Ltd

May 2023 – Present

Remote

BetterLesson – K-12 Professional Learning (EdTech — U.S. Schools)

Tech Stack: React.js, Java, PostgreSQL, AWS, DataDog, CircleCI

- Designed and developed the end-to-end **Coach Matching** system using React and Java, implementing complex business rules, scalable APIs, and PostgreSQL workflows to match coaches with teachers based on eligibility, engagement history, reviews, and validation criteria.
- Built the **Coach Invoicing** module for invoice generation, expense requests, status tracking, and Delivery Manager approval workflows.
- Established frontend infrastructure and owned AWS deployment pipelines using CircleCI and DataDog; resolved **20+ high-priority production issues** within two weeks, improving platform stability across critical workflows.

Digital Flex – HQIM Adoption Platform (EdTech — U.S. Districts)

Tech Stack: Vue.js, Nuxt.js, Pinia, Vite, FastAPI, MongoDB, SurveyJS

- Led UI architecture and frontend development using Vue.js, Nuxt.js, and Pinia, building reusable components, responsive dashboards, and performance optimizations including lazy loading, code splitting, and efficient state management.
- Designed and built Teacher Dashboard, Class Insights, Student Analytics, Feedback Surveys, and District Admin dashboards with drill-down analytics and automated reporting.
- Integrated LMS and IDP systems with SSO/OAuth and served as UI Lead, collaborating with stakeholders to ensure strong UX alignment and timely delivery.

FinTech Document Processing & Verification Platform

Tech Stack: React.js, Vue.js, FastAPI, Kafka, PDF.js, OAuth, Google Maps API

- Built modular document-processing interfaces supporting **5+ financial services**, enabling rapid onboarding of new document workflows and scalable multi-document processing.
- Refactored bank statement analysis using FastAPI and Kafka-based asynchronous processing with automated report delivery, reducing manual effort by **40%**; implemented AES encryption and controlled access for secure workflows.
- Developed digital KYC and address verification with geolocation, Google Maps, selfie capture, e-signature, and multi-document uploads, reducing manual verification effort by **60%**.
- Built a cross-platform content promotion system with OAuth integration across Instagram, YouTube, Facebook, and TikTok, supporting campaign management and performance tracking for **500+ accounts** with 2-3 scheduled posts daily.
- Leveraged AI agents, reusable skills, and automated workflows alongside product development to automate repetitive engineering tasks, including Jira story processing and contextual comments, accelerating development and increasing engineering throughput.

Technical Skills

Frontend (Primary): Vue.js, Nuxt.js, React.js, Pinia, Redux, Vuex, Quasar, Tailwind, Bootstrap, Chart.js, Nuxt UI, PDF.js

Backend: FastAPI, Node.js, Flask, REST APIs

Databases: MongoDB, PostgreSQL, MySQL, Firebase

Cloud & DevOps: GCP, Docker, Bitbucket Pipelines, GitHub Actions, Kafka, Nginx

Languages: JavaScript, TypeScript, Python, C++, SQL, HTML5, CSS3

Auth & Security: OAuth 2.0, SSO, JWT, AES

Testing: Vitest, Vue Test Utils

Build & Package: Vite, Webpack, npm

Tools: Git, GitHub, GitLab, VS Code, PyCharm, Postman, Figma, Visily
